

# For Television Match Officials, HIA, Medical, Media & Communication teams

Instantly seek, tag, clip, comment, annotate, and create video playlists collaboratively from anywhere in the world

Mobii's video review software is made available through a web browser-based application on the Mobii Encoders & via Connect cloud. Multiple users can join a secure session and work collaboratively from any device both locally at the stadium or remotely. With on-site **Microblock** enabled encoders, multiple streams can be delivered to remote production studios, globally, in real-time and in different output formats. This significantly reduces operating and logistics costs while maintaining performance efficiencies.

✓ Make game annotations on the fly

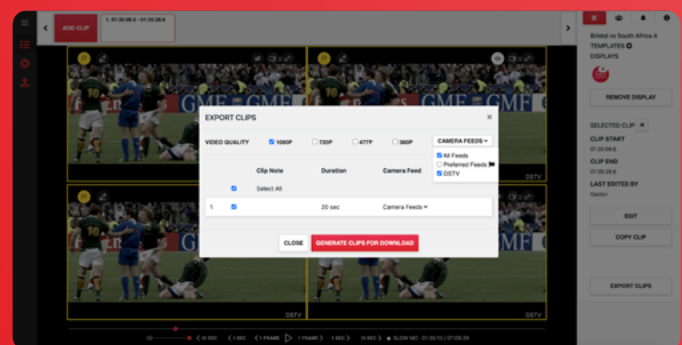

## Collaborate on premises or remotely

### TMO's, HIA & Medical teams

The ability for remote stakeholders to securely contribute to in-game decision making as if they are right there in the stadium. We introduce the concept of Virtual Medics and Virtual Match Officials which is made possible by our ultra-low latency **sub-500 millisecond latency**.

### Media & Communication teams

Quickly clip & export out individual video clips or entire playlists to promote in-game occurrences to a global audience on social media, OTT & broadcasting platforms ... or anywhere else your audience exists.

✓ Export clips to different resolutions & from multiple camera angles

Global sub <1 second  
ultra low- latency video

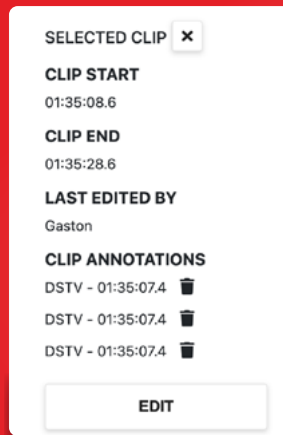

## Harness the power of sub-500 millisecond latency video management on-premises or remotely

- ✓ Fast setup, connect instantly, easy to use
- ✓ Supports multiple users working concurrently in sessions
- ✓ Cross-platform compatible - web browser based
- ✓ Navigate between multi-angle and single view of selected feeds
- ✓ Seek video instantly
- ✓ Playback speed control
- ✓ Extend / Duplicate views on additional screens
- ✓ Set customizable time delay per feed
- ✓ Quick click to tag event
- ✓ Events shared instantly to all local & remote users
- ✓ Set clip duration, add comments, annotate and set views
- ✓ Control playback views of selected clips
- ✓ Clip, share & export match video feed
- ✓ Secure remote live access to match session

✓ Personalized views, render on multiple displays

✓ Intuitive clipping

### Powering your video feeds

Synchronize, encode & upload your ultra low-latency Microblock streams in a variety of streaming formats for on-premises & remote consumption with the **Mobii Smart Encoder**

### Never miss a single frame with self-healing video

Our unique video processing technology ensures every video content is securely available for review and distribution both within and outside the stadium, making sure no single frame is ever lost.

### What our customers say

“With Mobii, we have been able to support critical match day services that depend on reliable, ultra-low latency video distribution. The ability to deliver multiple frame-synchronized video feeds with sub 1-second latency, means that Television Match Officials and Medical teams can make key decisions when it matters most. This ability supports our vision to migrate critical match-day venue operations to fully remote workflows.”
